UNIBLOCK

THE BEST MINERAL LICK IN EVERY FIELD

The only lick with 50% - it's **DYNAMITE**

A new process (patent pending) that allow us to put 1.3ton of molasses energy into every ton of **DYNAMITE**

Dynamite increases forage intake and animal performance because:

- The action of licking increases saliva production which buffers any acid produced when the bacteria in the rumen break down the sugar consumed.
- Normally feeding highly digestible sugars has a negative effect on the rumen microbe population (figure 1) but the little and often intakes of Dynamite along with the saliva production helps to increase the rumen bug population.
- More bacteria in the rumen means they can ferment more feed (figure 2) so the animal can eat more and this extra intake goes straight into milk or meat production.
- Dynamite also contains extra trace elements to ensure the animal has everything it needs to grow or produce milk

CATTLE

Weanling 300g/day
Stores 400g/day
Dairy/suckler cows (post calving) 500g/day

SHEEP (daily intakes)

Store lambs 50g/day
Ewes 80-100g/day

DYNAMITE can be fed with autumn grass as well

Figure 1: Rumen pH on varied diets (low pH results in poor digestion)

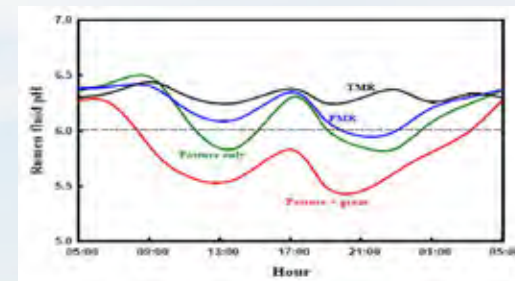

Figure 2: Supplementation with molasses boosts intake

Analysis

- Calcium-1%
- Phosphorus-0.1%
- Magnesium-0.3%
- Sodium-2%
- Se-5mg/kg
- Co-15mg
- I-40mg
- Mn-200mg
- Zn-1,200mg
- Vit A-40,000iu
- Vit D3- 8,000iu
- Vit E- 80iu
- Sugar as sucrose-50%
- Oil-3%
- Protein-4.5%
- ME-12.4MJ/kg DM
- Dry matter-96%

Ideal to prevent twin lamb disease & ketosis
